Website: www.deercreeksimmental.com

We are selling 10 bulls and 8 open heifers. The sale is on November 13 at 11:00am at the farm at 3466 Lowesville Rd, Roseland, VA. Our sale format is simple and has worked well. All cattle have a base price. On sale day, buyers check in and get a buyers number. Buyers write their number next to the bull(s) or heifer(s) that they are interested in. Cattle with more than one buyer number listed will be auctioned off at 11:00am and will be sold to the highest bidder. Cattle with only one buyer number listed will not be auctioned off, and the buyer gets the animal at the base price. Buyers should write their number next to any animals they are interested in. Placing a buyer number next to an animal number does not require the buyer to bid if they already purchased their cattle wants and needs earlier in the sale. Any bulls that did not have a buyer number listed will be available immediately after the sale at the listed base price and thereafter until sold. Heifers will only be available sale day. Any heifer that did not sell on sale day will be put back in our replacement pen and no longer be for sale. Phone bids are welcome for buyers that cannot be at the sale in person. We will write your buyer number next to the cattle that you are interested in and will call you at 11:00am when the auction starts.

The bulls were developed on the farm in a grass pasture and fed Accuration to supplement their forage. The bulls grew very well and turned out nicely. They all walk and travel well and are sound footed. They were vaccinated for all respiratory viruses and 7 way vaccine pre weaning and boosted again at weaning and were dewormed. When yearling weights were taken, they were vaccinated with Bovi-Shield Gold FP5 L5 for protection against respiratory and reproductive viruses, and were dewormed. The heifers are from our replacement group and are top of the line. There are 5 open yearlings and 3 open spring born heifers. The yearling heifers grew exceptionally well on mostly grass since weaning. They only received 6 lbs. grain per day and had good yearling weights and body condition. The spring weaned heifers have great genetics.

All bulls and heifers have been DNA tested and have genomically enhanced EPDs. The incorporation of DNA data adds approximately 25 progeny reports to their record and increases the accuracy of the EPD. How great is that, to buy a bull or heifer with the equivalent of 25 calves born by them and data reported? The DNA testing also provides parentage verification. So we are confident that the pedigree is correct. We have all had a calf or two born early or late and wondered if it is sired by the A.I. or natural service breeding. DNA sampling helps with that. We also tested for homozygous black. Our cattle are backed with as much information as we can gather. Our cowherd is managed on an all forage program. We do managed intensive and rotational grazing. You can count on cattle from us to be easy keeping on grass. Thank you for your interest in our cattle.

Mark Campbell and family

H17 is an attractive black white face bull. He has great structural soundness with smooth shoulders, a long stride and excellent feet. His dam has been a consistent producer and longevity is bred into this bull. Look for this bull to add extra pounds at weaning and post weaning if you retain ownership on calves. Lots of milk too. Ribeye EPD in the top 5%.

H20 is the growthiest bull of the group with lots of power. His WW and YW EPD are in the top 5%. In addition, he has a high ranking ribeye EPD. Expect his calves to have added growth and muscle expression. You should probably retain some heifers sired by him considering his milk EPD and stayability EPD. Homozygous black.

H21 is a bull that checks all the boxes. He is one of the highest API (All Purpose Index) and TI (Terminal Index) bulls of the group. His EPD profile is terrific with almost all his EPDs being in the top 30% or higher. You can use this bull comfortably on heifers and still expect plenty of growth. He is a true spread bull with a -2.1 BW and 135 YW. His dam is a registered Angus cow that I bought from Buddy Shelton in Gretna, and the sire, Beacon, is known for producing value added cattle. He has a touch of white in his left eye when he got pinkeye as a calf in the late fall of 2020. Don't worry, he sees fine. He also has the value-added traits of homozygous black and homozygous black.

H23 is sired by TJ Main Event as are several other bulls in the offering. He is a SimAngus bull that we mated to our Sim Angus cows and we have been pleased with his calves. H23 is a balanced bull with length. Balanced EPDs and useful all purpose bull. His dam is a black white face SimAngus cow. So you might get an added bonus of some bwf calves from him. He is homozygous black and homozygous polled.

Take note of his stayability EPD in the top 2%. His dam just turned 13 years old this year and she had another calf this fall. You may want to retain replacement heifers from this bull because they will be sound footed and stay in the herd a long time. His dam also has plenty of milk and that is reflected in his EPD.

This bull is more Angus than Simmental. This larger framed bull is deep sided and long. He can easily be used on heifers. He is another spread bull that offers calving ease and negative BW EPD, but still provides extra growth and average daily gain. He is an all purpose bull, and the API of 141 reinforces that.

H45 is smaller than the rest, but mainly because he isn't 12 months old yet. He has generations of red Simmental genetics in his pedigree. His dam is an easy keeping cow with a beautiful udder. I really like his bold rib shape and extra bone in his legs. He should travel well and maintain good body condition on grass. He is another bull that can be easily used on heifers.

Here is a 2 year old bull, and is ideal if you need an older bull now for larger framed cows. G30 is stout and rugged made. We used him as clean up on cows behind A.I. breeding. The calves born this fall are stout made and thick. Birth weights were 64,64,88,82,70,72, but still advise for cows and not heifers. Hayden had a full sister to this bull that did very well at state and regional shows. Good genetics and homozygous black.

H16 is from one of our best cows and sired by one of the highest numbered Simmental bulls in the breed. While moderate in her frame, she has good body capacity and will be an efficient cow on grass that weans a high percentage of her body weight. Excellent genetics and homozygous black.

H44 is the youngest of the yearling heifers. She won't be a big cow, but she has the genetics behind her to be in the herd a long time, be problem free, and efficient on grass. Her dam turned 11 this year and her paternal grand dam turned 10, and both of them are still in our herd. H44 is predicted to have plenty of milk with calving ease for her and her daughters.

J6 is another Broad Range daughter. Her pedigree is a bit different in that her maternal grand sire, Pathfinder, is a fullblood Fleckvieh Simmental (the original Simmental for those not familiar with the terminology). J6's dam turned 11 years old this year with another calf on the way. J6 should be a problem free, broody, cow.
